

Library Management System

Introduction

A Library Management System is a software built to handle the primary housekeeping functions of a library.

Libraries rely on library management systems to **manage asset collections** as well as relationships with their members. Library management systems help libraries **keep track of the books** and their **checkouts**.

Library management systems also involve maintaining the database for **entering new books** and **recording books** that have been borrowed with their respective due dates.

Problems

Search Records

Difficult to manually search records

Space Consuming

Physical records consume a lot of space

File lost

Data can be lost due to human carelessness

Costly

As manual work is required system becomes costly

- Business process automation
- Be easy to operate
- Be scalable
- Make functioning of library faster & cost efficient
- Meet user requirements

SCOPE OF PROJECT

Functional Requirements

USER:

1. Sign-Up
2. Login
3. Search a book
4. Issue Book
5. Return book & check fine
6. Request a new book
7. View status of requested books

ADMIN:

1. Sign-up
2. Login
3. Search a book
4. Add a new book
5. Delete a book
6. Update book details
7. Approve/Reject a book request

Technologies Used

MongoDB

Fast & Scalable
Schema Less
Data stored as JSON

M

E

Express API

Efficient
Code reusability
Robust API

ReactJS

Virtual DOM
Components
High Performance

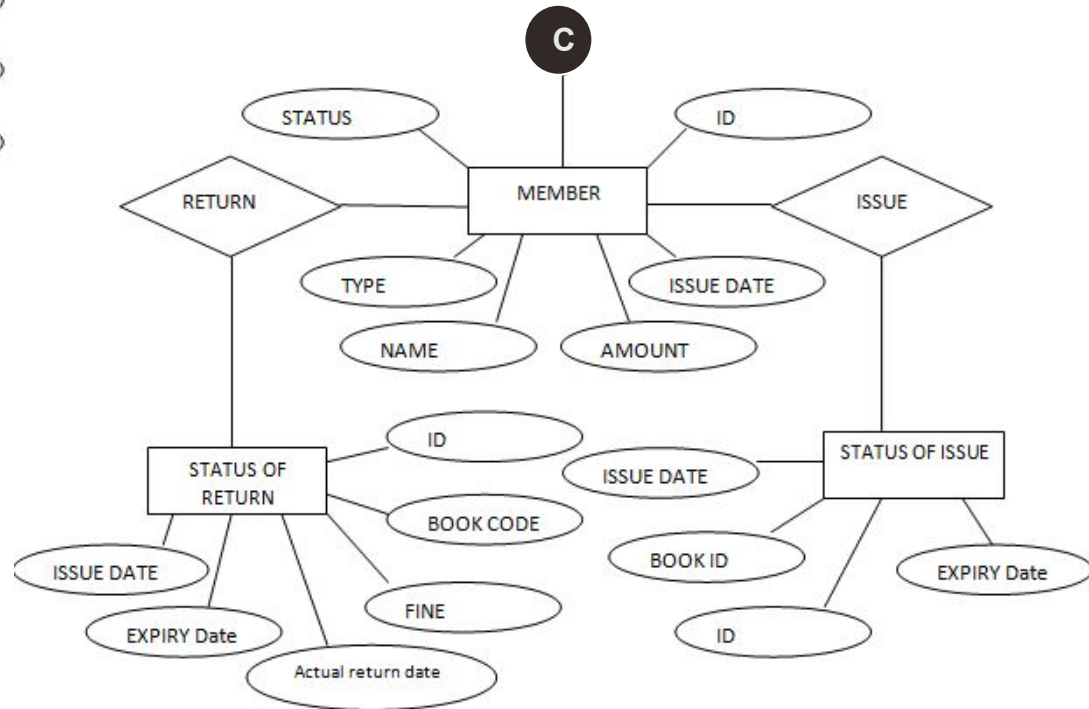

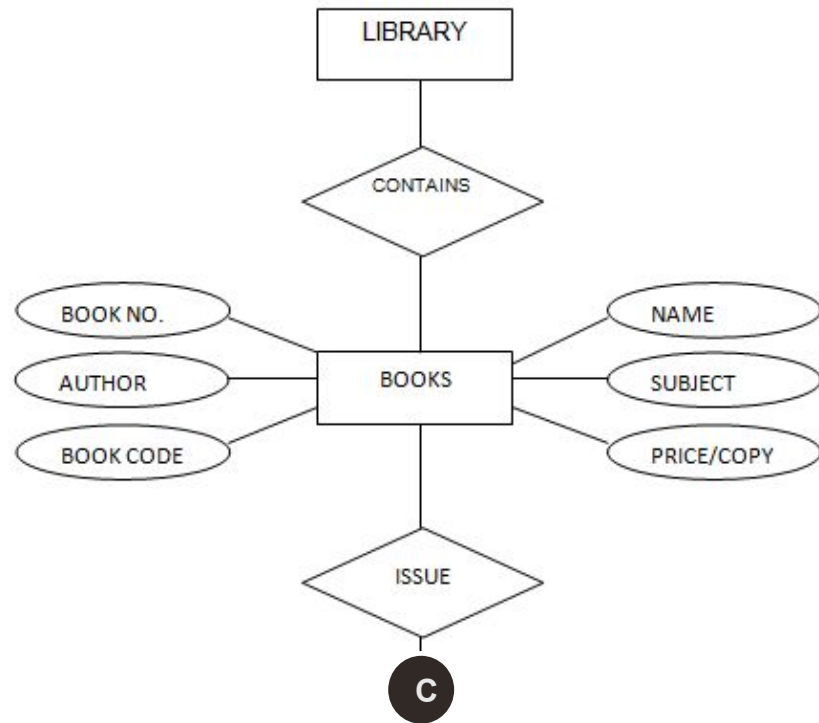

R

N

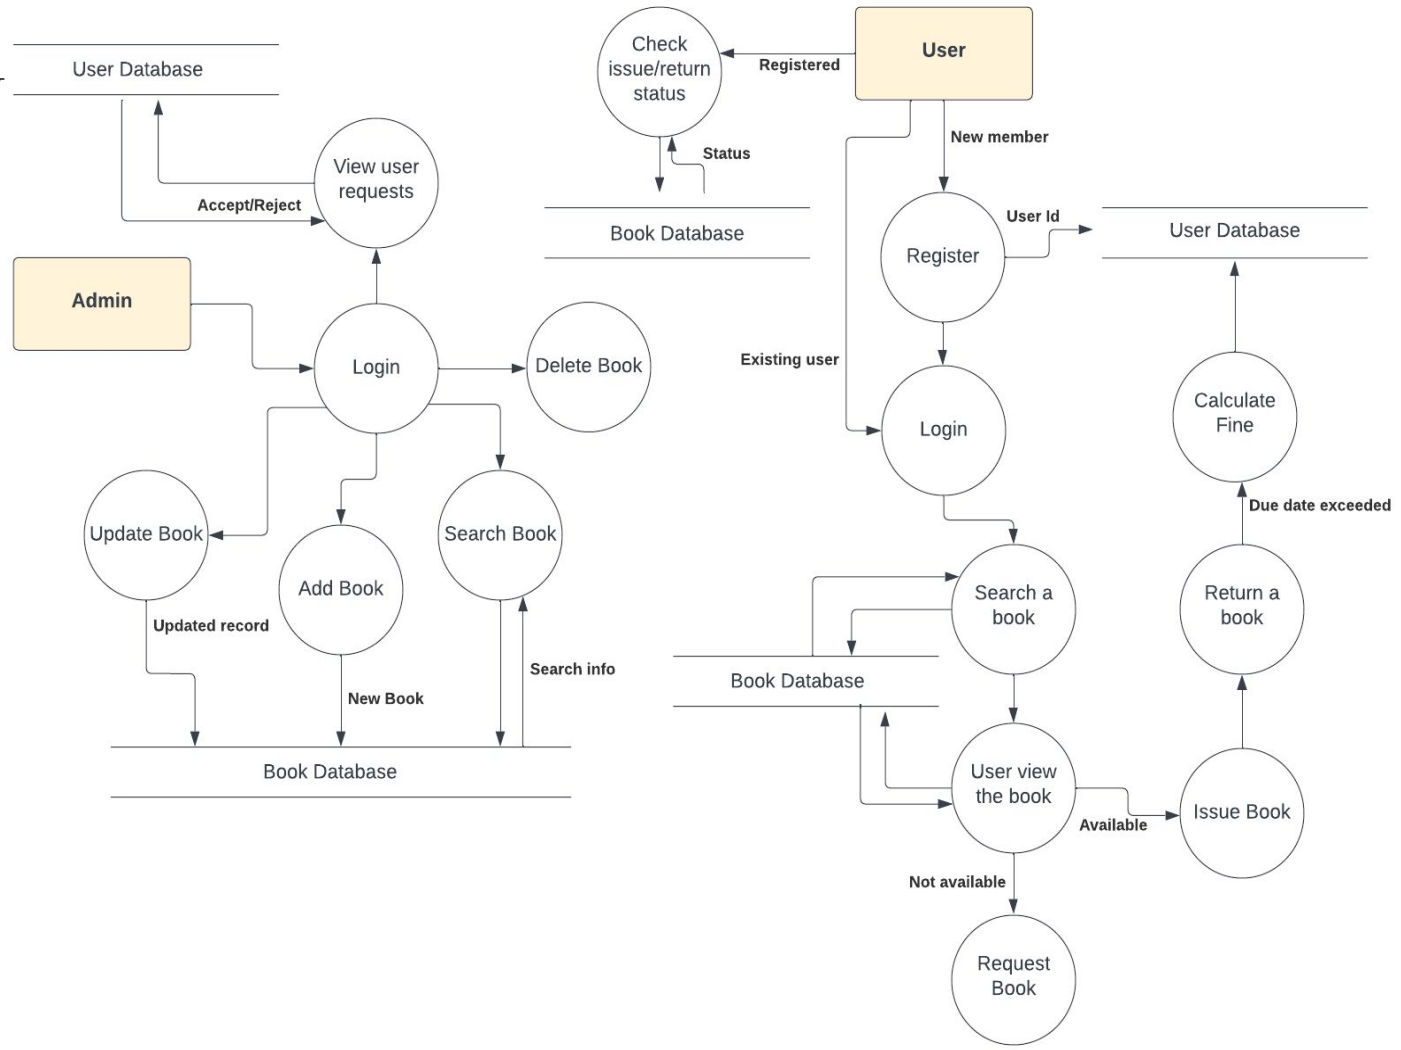

NodeJS

Open-source
Fast
Highly Scalable

Why choose us

1

New Books

Find the most trending books featured in our catalogue

2

Large Bookbase

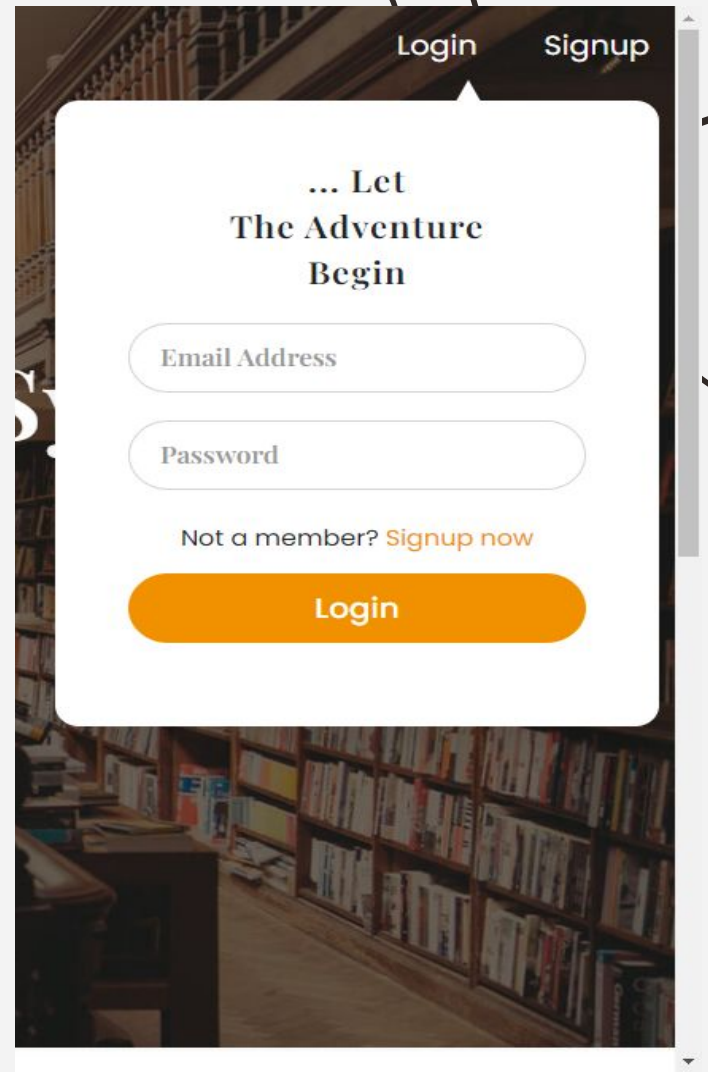

More than 5000+ books with an ever increasing collection

3

Accessibility

With this website on your fingertips get all updates instantly

Future Scope

01. Online Fine Payment

LMS will also serve as a platform to pay their fine via online payment.

02. Barcode Scanning

To read the barcode & update when books are scanned while issuing or returning.

03. Book Maintenance Status

Adding status for trash books or books under maintenance.

Thank You
